

## SPONGE RUBBER

**FDA Product Approval**  
with the latest certificates!

# CONGRATULATIONS!

## Sponge rubber from BOSIG with the latest FDA certification

**You can rely on BOSIG! Sponge rubber is suitable for applications in the food industry – with letter and seal**

FDA approval in accordance with directive 21 CFR 177.2600 confirms that our sponge rubber qualities are safe for contact with food. With the latest formulations and ingredients, including blowing agents, which are REACH-compliant – everything for your safety. The FDA approval for our Elastoform® sponge rubber is independent of the sponge rubber colour.

The FDA (U.S. Food and Drug Administration) is the US-American authority responsible for the approval, control and monitoring of foodstuff in the United States. The guideline 21 CFR 177.2600 specifies ingredients and, if applicable, limit values for rubber compounds that may be used for contact with food.

 **ELASTO**form

BOSIG sponge rubber blocks as well as processed products such as sponge rubber balls for cleaning pipelines, e.g. in beverage dispensing systems, and sponge rubber rolls used for labelling food packaging meet the requirements of the **FDA product class „Contact with food“**.

The FDA Approval certifies the excellent sponge rubber quality of Elastoform® sponge rubber from BOSIG – and you can expect the same!

**If you have questions, please contact your specialist field consultant!**
