Winflex® Outside – Now even better!

NOW EVEN BETTER!
Grey – for special
UV protection

 **BOSIG**

Winflex® Outside

Our grey window connection tape – now with improved UV resistance.

Winflex® Outside is a window connection tape for the swift and reliable sealing of outer connection joints for windows and doors.

Winflex® Outside is vapour-permeable. **Winflex® Outside** is available in various, processor-friendly versions. Fixing the tape to the frame is made considerably easy with a self-adhesive strip.

And now it's even getting better!

We have improved the tape further in making the felt layer that is already perfectly suited to be plastered over, even more resistant to UV.

You will recognise the new **Winflex® Outside** by the way it shimmers grey.

The product improvement makes it possible to reach up to nine months of UV resistance during outdoor weathering, and that makes the tape even more efficient.

The formula is easy

Proven BOSIG quality + technology improvement
= safety and success!

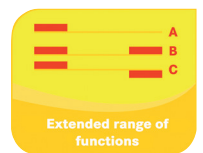

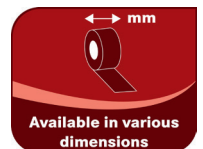

NEW!

- Grey instead of white
- More powerful
- UV resistance of 9 months

Characteristics:

Standard roll width: 70/100/150 mm

- UV resistance of up to nine months during outdoor weathering
- Heavy rain proof
- Highly stretchable and flexible adjustment
- Meets the requirements of the ENEC RAL-guideline and state-of-the-art technology
- Very good for plastering and painting over
- Can be fitted with self-adhesion – as per your requirements.

BOSIG – Build on Solutions.
